Is the DataSquad Model For You?

A DataSquad is a team of paid undergraduates who learn data and software work by doing it, and show researchers how to do theirs better.

Paula Lackie, Oliver Hall, Tim Dennis, Leigh Phan
Carleton College DataSquad | UCLA Library Data Science Center DataSquad

Students are not just the tool. They are a beneficial product of the service.

Campuses need more data and software help than staff can give. Courses leave gaps, and so does the code researchers write. Squads are the glue. Many students never hear of this work, especially those from underrepresented groups.

A paid job that teaches

Students are paid employees, supervised by library or department staff. They help researchers with data from wrangling to reproducibility.

Who is on a squad

- Student **data analysts and developers** do the hands-on work with data and code.
- A student **project manager** triages requests.
- Student **technical writers** document projects.
- **Staff** supervise and mentor, fund, and sustain the squad.

Limits we keep

We help with a researcher's data and code. We don't change their research questions, tutor their students, or share what we learn in confidence.

What slows us down

Student availability, the academic calendar, onboarding, review, and graduation handoffs all slow the work. More students take on more varied projects but need more oversight. Handbooks, templates, and staff are what stay when students graduate.

What the work looks like

Some projects end as public code, others as a dashboard or a sketch. Not every client needs a public repository.

CARLETON

Election-news scraper. Nine students started, extended, or used it from 2021 to 2024 to collect broadcast transcripts for a political science project. **The tool outlasted the students who began it.**

UCLA

wbcheck. Students began this Carpentries lesson checker in 2023, and it evolved as we learned what collaborative lesson development takes. In 2026 staff filled in the code with AI assistance. It has 48 documented rules, tests, a BSD-3 license, and a citation file crediting its student authors (doi:10.5281/zenodo.23329531).

CARLETON

Language placement dashboard. The project ran longer than any student would stay, so the squad sketched the database and chose heatmaps for the development team to build.

UCLA

UC OSPO education site. Students built the lesson pages and search for a catalog of 55 open source lessons. It has a citation file and a DOI (doi:10.5281/zenodo.23330022) crediting its developers.

Research software habits, when the project needs them. Run instructions, a dependency list, one test, a citation file. We don't treat them as a checklist, and we plan to track whether clients keep them.

Where students go next

We located 19 UCLA former student employees. By current job category (public profiles, 2026):

Data / analytics / consulting	11
Software / engineering / IT	4
Research / graduate school	2
Nonprofit / public sector	2

Descriptive, not a placement rate.

What adopting takes

- Paid student positions and a wage budget
- Supervisors and mentors with time to review work and coach students
- Onboarding and a home for documentation
- A plan for turnover

Start one

The starter kit covers roles, confidentiality, onboarding, and request tracking. Students learn software sharing and curation from our open lesson, **Sharing Research Software**. Supervise students? Tell us your hardest obstacle.
